

YUNUS EMRE KILIÇ

Software Developer | Turkey

Email: yunus13e0@gmail.com | Phone: +90 535 465 1747

[LinkedIn](#) | [Github](#)

Professional Summary:

I am an Information Systems Engineer specializing in Backend, Artificial Intelligence, and DevOps practices. I use Node.js and Express.js for server-side development and build sustainable and scalable systems with TypeScript-based architectures in my projects. I have practical experience in database management and API development with PostgreSQL, MySQL, and Firebase. While my main focus is backend systems, I am also proficient in the Next.js and React ecosystems to develop end-to-end projects. I am a highly motivated learner, quick to adapt to new technologies, and a team player who aims to add value with my technical skills in a team environment.

Education:

Kocaeli University - Information Systems Engineering - Graduation July 2026

Advanced Data Structures and Algorithms Certificate - (C#).

Work and Internship Experience:

SAP ABAP Developer Intern | Conforcus Bilişim Danışmanlık | July 2025 - Sept 2025

- Assisted in backend logic development using **SAP ABAP** and supported enterprise-level service integrations.

Software Developer Intern (Web & AI) | Conforcus Bilişim Danışmanlık | Sept 2025 - Jan 2026

- Support AI (Internal Tool) | Python, Ollama, Vector Embeddings

Engineered an **AI-powered SaaS platform** using **Python**, **Ollama**, and **Vector Embeddings** to automate customer support emails. Integrated with a responsive **Next.js** interface, the system generates semantically accurate solutions, significantly reducing response drafting time by ~80%.

- Multi-Agent Financial Analysis Platform | LangGraph, Python, OpenAI

1. Built a sophisticated investment tool using **LangGraph** and **Python**, orchestrating 5 autonomous **AI agents** for real-time parallel stock data analysis, trend prediction, and news retrieval via **OpenAI**.

2. Developed a feature-rich **Next.js** and **Material UI (MUI)** dashboard featuring interactive stock charts, an **AI investment chatbot** with **SQLite authentication** to manage secure user sessions locally.

- X-Ray Defect Detection using Transformer-Based Vision Models | Python, TensorFlow, Matplotlib, Transformers

Designed an end-to-end computer vision pipeline by scraping and preprocessing medical X-ray images for binary classification (fractured vs. healthy). Trained and benchmarked multiple transformer-based and CNN architectures (ViT, BEiT, Swin, DeiT, ConvNeXt) in a GPU-accelerated environment. Evaluated model performance through quantitative metrics and visualized training results to support comparative analysis.

- Developed a comprehensive Admin Dashboard (CMS) using **Next.js**, **Material UI** and **TypeScript**, enabling dynamic management of all website content. Implemented Role-Based Access Control (RBAC) and engineered secure data operations using **PostgreSQL** and **Prisma ORM**.

Skills:

Backend Development: Node.js - Express.js - PostgreSQL - Prisma ORM - Firebase

Frontend Development: Next.js - Material UI

AI & Machine Learning: PyTorch - TensorFlow - Numpy

DevOps & Tools: Docker - Git & GitHub - CI&CD Processes

Languages: TypeScript - Python - C# - JavaScript

Extra Projects:

- Disaster Relief Communication System (TÜBİTAK 2209-A) | React Native, Bluetooth Mesh, NLP

1. Developing an offline-first mobile application that utilizes **Bluetooth Mesh** technology to establish a decentralized communication network, enabling data transmission without Internet or GSM.

2. Implementing an **AI-driven NLP module** to analyze and prioritize help requests, generating real-time density maps to coordinate rescue teams effectively.
